

Technology & Product Capability

A professional summary of our technology strengths, operational capability, and working product portfolio for enterprise digital transformation.

Cybersecurity

Infrastructure

Software & AI

IoT Monitoring

Managed Services

Executive Capability Snapshot

We help enterprises design, secure, automate, monitor, and operate critical technology environments through an integrated combination of infrastructure, cybersecurity, software, AI, IoT, and managed operations capability.

6

Core service lines

5+

Working product platforms

24x7

Operations-ready mindset

End-to-End

Consult, build, run

Business Objective Alignment

We map technology investments to measurable outcomes: availability, compliance, security posture, operational visibility, automation, and service quality.

Engineering-Led Delivery

Our approach combines architecture, implementation, integration, testing, documentation, training, and handover with clear accountability.

Productized Capability

Our platforms convert domain experience into repeatable solutions for monitoring, visibility, vulnerability assessment, IPDR analytics, and water quality intelligence.

Technology Capability Across the Digital Stack

Cybersecurity

VAPT, SOC/SIEM, GRC, threat intelligence, cyber exposure management

IT Infrastructure

Network, server, storage, virtualization, data centre, cloud and systems management

Software & AI

Enterprise applications, custom software, AI integration, automation, analytics

IoT & Smart Monitoring

Industrial IoT, machine health, water quality, environmental and electrical/fire-risk monitoring

Managed IT Services

NOC, infrastructure monitoring, helpdesk/ITSM, AMC, remote support, managed security

Consulting & Training

IT strategy, security architecture, digital transformation and capacity building

How we create value

- Assess
- Design
- Implement
- Integrate
- Operate
- Improve

Working Product Portfolio

Our products are designed for practical enterprise operations, with emphasis on on-premise control, security, data visibility, compliance reporting, and operational continuity.

AI IPDR / NetIntel

IPDR analytics, subscriber/IP correlation, metadata retention, investigation and compliance reporting.

AI ENMS

Enterprise network monitoring, device health, topology, events, incidents and service visibility.

AI SMMS

Smart monitoring and management for operations, alerts, assets, service workflows and dashboards.

AI NestedVA

On-prem vulnerability assessment, audit checklists, device scanning, evidence and professional reporting.

AI NeetIQ

AI-IoT water quality monitoring for food, industry and critical environments.

Product philosophy: secure by design • integration ready • field deployment oriented • measurable outcomes

CYBERSECURITY

Cybersecurity & Risk Capability

Security Assessment & VAPT

Network, server, web application and configuration assessments with evidence-based findings, risk rating and remediation guidance.

SOC, SIEM & Threat Intelligence

Log onboarding, event correlation, alert lifecycle, threat feeds, MISP/indicator enrichment and incident triage workflow.

GRC & Security Governance

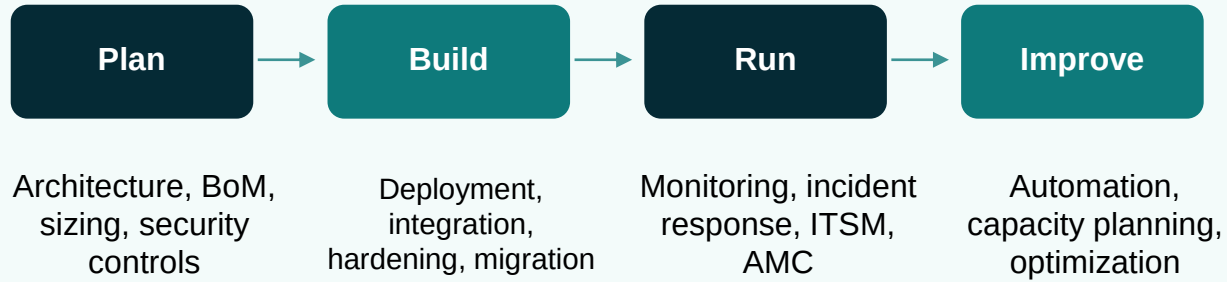

Policy, compliance mapping, control review, audit readiness, risk register, gap assessment and executive reporting.

Cyber Exposure Management

Continuous visibility across assets, vulnerabilities, misconfigurations, open risks and remediation priorities.

OPERATIONS

Infrastructure, Cloud & Managed Operations

Enterprise Infrastructure

Network, wireless, security gateways, data centre, server/storage, virtualization, backup and cloud-ready infrastructure.

Managed Operations

NOC, health monitoring, SLA-oriented support, remote troubleshooting, asset visibility, patch coordination and escalation management.

We focus on availability, scalability, manageability, security hardening and documentation so the environment remains supportable after go-live.

IoT, AI & Smart Monitoring Capability

Field Sensors & Edge Devices

Water quality, environmental, machine health, electrical and fire-risk data acquisition from industrial environments.

Data Platform & AI Analytics

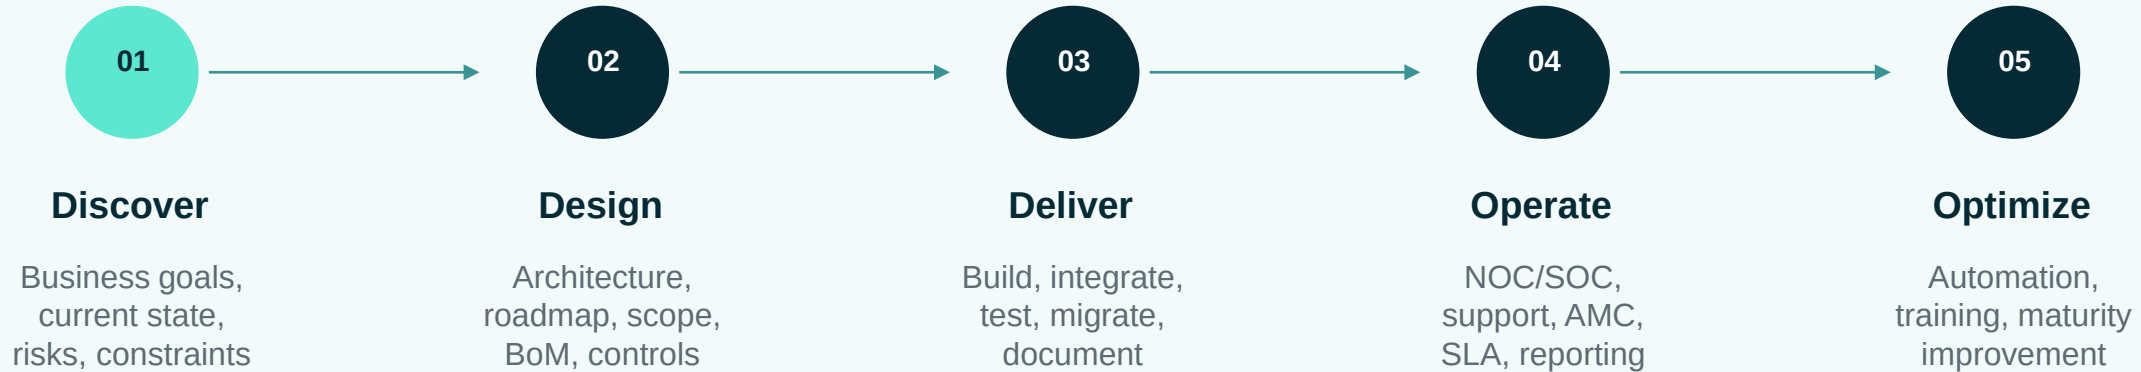

Dashboards, threshold logic, trend analysis, anomaly detection, predictive insight and event notification.

Enterprise Integration

API, reporting, alerts, service ticketing, compliance records and operational escalation to the right team.

Example platform: AI NeetIQ for AI-IoT water quality monitoring in food industry, utilities, hospitals and industrial facilities.

Delivery Model & Engagement Governance

Governance Controls

Weekly review, risk/issue register, change control, acceptance criteria, documentation, knowledge transfer and executive progress reporting.

Quality Assurance

Solution validation, security checks, test evidence, pilot rollout, UAT support, rollback plan and handover checklist.

Capacity Building

Hands-on training, admin guides, SOPs, awareness sessions, labs, operations runbooks and skill development for customer teams.

Why partner with us

- Integrated capability from advisory to implementation and managed operations
- Practical product portfolio for network visibility, IPDR analytics, VAPT, IoT and AI monitoring
- Security-first delivery with documentation, training and measurable operational outcomes
- Flexible engagement model for pilot, project delivery, AMC and long-term technology partnership

We are ready to support assessment, solution design, pilot execution and phased deployment based on the client's business priorities.
